OBJECTIVE

Varun Verma is a Full Stack Developer and Cloud Architect with over 13 years of experience in designing, developing, and deploying scalable web, mobile and distributed applications over cloud solutions.

EXPERIENCE

Shell, Bangalore

April 2022 – Present

Senior Technical Lead

- Writing python and dotnet SDKs for confluent kafka APIs to make trading faster.
- Created backend service and integrated SSO authentication and authorization using SAML and OAuth2.
- Automated the user onboarding to technical projects through organization.
- Reduced operation toil from 9 hours to 5 minutes with Azure DevOps and GitHub Actions.
- Created GitHub templates to reduce the developer efforts with industry standard tools integrated.
- Created extraction logic from pdf file to convert unstructured data to structured.
- Developed MLOps pipelines and SageMaker automation templates.
- Created automated distributed AWS account provisioning with necessary services installed.
- Designed airflow pipelines for bringing data from edge devices to unified locations in order to visualize centrally and thereby removing 3th party cost.
- Provided many trainings across organization for DevOps and Web Applications.

Deloitte, Gurgaon

February 2021 – April 2022

Manager (Architect)

- Implemented integrations with Azure Logic Apps to automate GitHub provisioning and SonarQube onboarding.
- Strategized and secured \$180K business in one year.
- Designed MicroServices architecture for a leading fintech company.
- Developed a custom Terraform provider to manage on-prem infrastructure.
- Architected multi-region replication service with security and encryption.

Nagarro, Gurgaon

June 2014 – February 2021

Associate Staff Engineer

- Led design creation and implementation, optimizing search results for customers.
- Mentored four developers in full-stack development and unit testing.
- Created chatbots using MS Bot Framework and Dialog Flow.
- Automated data updates, reducing time and effort.

Amdocs India Limited, Pune

Aug 2012 – April 2014

Subject Matter Expert

- Configured and implemented enterprise SharePoint Search.
- Created web portals using front-end technologies.
- Developed WCF Windows Service to expose portal data to consumers.

PROJECTS

Cross organization information analysis

- Created several pipelines to bring data from a number API portals to visualize information in PowerBI
- Integrated translation service to translate customer's document to native languages.

Wind Farm Power Generation NLP

- Developed a solution to extract and transform PDF data using AWS Textract and Azure Functions.
- Streamlined customer reporting using AI and machine learning models.
- Executed MLOps with SageMaker for agile model deployment.

Energy Savings Marketing Portal

- Optimized API performance, reducing response time by 15%.

- Implemented SSO and custom search results for vendor-specific outcomes.

Hyper Automation Templates

- Created boilerplate code templates to enhance productivity with GitHub repositories.
- Integrated OCR libraries for Node and Python for data extraction.

Enterprise Search for public site

- Implemented internal information search for a multi million users across globe for a leading billing company.
